

Voice Preservation: Why Privacy Matters

On-Device Key Advantages Versus Cloud Solution for Your AI Voice

Voice preservation, or voice banking, uses Artificial Intelligence to create a digital replica of your voice. By recording 50 phrases, you can preserve its essence. Services like My-Own-Voice let you create your synthetic voice from home with a device (PC or mobile app) and internet. This technology helps maintain your identity and ensures your voice stays with you, even in case of voice loss. With a focus on privacy and security, Acapela Group keeps your voice data safe, giving you control over your voice's legacy.

Your voice, Your privacy

Complete Control Over Your Voice & Data

Your voice and personal data stay secure with My-Own-Voice by Acapela. Our voice preservation technology keeps your data on your device—giving you full control and privacy—unlike cloud services that don't guarantee ownership. Your voice is protected directly on your device for peace of mind.

Data Privacy and Security

With local storage, your data is entirely under your control. Your voice and personal details remain private, ensuring that sensitive information like credit card numbers and Social Security data is kept secure and protected from unauthorized access or interception. Your privacy is our priority.

No Third-Party Access

Acapela Group prioritizes your privacy by keeping your personal data safe from prying eyes. Our on-device solution ensures that your information remains completely private and is never exposed to third-party providers. With us, you can trust that your data won't be shared, sold, or accessed without your permission.

No Internet. No Problem.

Your voice will talk anytime, regardless of internet connectivity.

Offline access is especially crucial for ensuring the perfect use of your assistive communication solutions at any time, even in areas with unstable or no internet and guarantee the use of your voice anytime you need it.

No Additional Subscription Fees

With Acapela Group, there are no hidden fees—just a one-time cost for a reliable voice preservation solution. By using an on-device approach, you avoid the ongoing subscription fees typically tied to cloud services. You only pay for your voice, making your investment simple, predictable, and hassle-free. One and done.
